FOR IMMEDIATE RELEASE

## **Coding School, Data Science Boot Camps Offered in Peachtree Corners**

*After success of first coding boot camp, three additional classes to be offered.*

**PEACHTREE CORNERS, GA, April 11, 2019** – Due to the expanded demand for computer coding skills and those needed to analyze and solve complex data analytics and visualization problems, the city of Peachtree Corners, in collaboration with [Georgia Tech Professional Education](#) (GTPE), will again offer classes at [Prototype Prime](#), the startup incubator located in Technology Park Atlanta.

Because there was such a high interest in the first computer coding boot camp that began in January, GTPE is offering a second 24-week coding boot camp to begin in May. Additionally, two data science boot camps will be offered beginning in August.

“Our first coding boot camp was a tremendous success,” said Mayor Mike Mason. “The class was full weeks before it began, and we had a waiting list of potential students who wanted to register. This was a good problem to have, and we are delighted that we’re able to work with Georgia Tech again to offer not only coding classes, but data science and analytics as well.”

### **Details on the Classes:**

#### **[Coding Boot Camp: Peachtree Corners Begins May 28, 2019 – 24 weeks](#)**

Web development is a high-growth career track, and the Georgia Tech Coding Boot Camp teaches students the specialized skills to tap into this industry. Through a fast-paced, immersive curriculum, students learn the skills needed to become proficient in front-end and back-end technologies.

The classes cover front-end and back-end technologies. Students graduate with the skills needed to become a full-stack web developer. Classes will be held three days a week and taught at Prototype Prime, the city’s startup incubator.

## [Two Data Science Boot Camps: Peachtree Corners Begins 8/5/19 and 8/6/19 – 24 weeks](#)

With the rise of data in today's economy, Georgia Tech's program focuses on teaching learners the practical and technical skills needed to analyze and solve complex data analytics and visualization problems.

This part-time program covers a broad array of technologies including Excel, Python, JavaScript, SQL Databases, Tableau, and more over the course of 24 intensive weeks. Students learn from skilled instructors and gain real-world experience by collaborating with peers on complex projects and building a comprehensive portfolio.

The 24-week class meets three days a week and will be taught at two locations, Prototype Prime and the Community Chest room at [Peachtree Corners City Hall](#).

To enroll, or for additional information on the Georgia Tech Professional Education coding boot camps, please visit the [Georgia Tech Professional Education website](#) or call 404-328-7187.
